

ParkingSite

Represents a complete parking lot on a given street, made up of a set of parking groups

EntityId: NGSI id of a city entity

EntityType: entity type

Location: List of the longitude and latitude of the entity's borders position

Address: Road Name

refParkingGroups: list with the NGSI ids of the parking groups that are part of the parking site

InsertionTimestamp: Timestamp at which the data arrived at the platform

EventTimestamp: Timestamp at which the data was generated by the sensor (detection instant)

RecvTime: Same as EventTimestamp (was used to sort the data)

ParkingGroup

Represents a set of parking lots that share similar properties (such as support for electrical charging) and requirements for their use (such as fees)

EntityId: NGSI id of a city entity

EntityType: entity type

Location: List of the longitude and latitude of the entity's borders position

requiredPermit: String with the permissions necessary separated by “,”

refParkingSpots: list with the NGSI ids of the parking spots that are part of the parking group

InsertionTimestamp: Timestamp at which the data arrived at the platform

EventTimestamp: Timestamp at which the data was generated by the sensor (detection instant)

RecvTime: Same as EventTimestamp (was used to sort the data)

ParkingSpot

Represents a specific parking space for a single vehicle, which may or may not be occupied and whose status is checked by a specific sensor

EntityId: NGSI id of a city entity

EntityType: entity type

Location: List of the longitude and latitude of the entity's center position

Status: state of the spot: occupied , free , unknown (if the parking spot is mapped but there is no sensor currently validating the state)

refDevice: NGSI id of the sensor entity that generated this data

InsertionTimestamp: Timestamp at which the data arrived at the platform

EventTimestamp: Timestamp at which the data was generated by the sensor (detection instant)

RecvTime: Same as EventTimestamp (was used to sort the data)
